BEAUTY AND PERFORMANCE ON THE OCEAN

With over 30 years of experience designing traditional and contemporary homes, J. Brian Buckley knows what it takes to build and design a quality home that meets the needs of his clients. When he looks to design on the New England coast, he knows it takes high performing and quality products.

Large windows and glass expanses are a must when designing homes on the New England coast. The Cohen Residence in Old Saybrook, CT provided an extra challenge as it was located on a corner lot where the varying functions of the rooms may not always allow for large windows.

J. Brian Buckley chose Integrity Wood-Ultrex windows and doors for this project to meet the homeowner's needs of an ocean view. The wide range of products and flexibility of grille patterns allowed for combining large and small windows to create a design continuity. The clean lines in the product designs and large glass areas created a beautiful façade allowing clear views of the ocean from nearly every area of the home. In addition, Integrity's Ultrex® material is ideal in a coastal environment as its tough Ultrex® material and certified finish can stand up to the harshest elements.
